

## WHAT IS COLOURGUARD?

Lawn Solutions Australia's ColourGuard is a 100% organic and non-toxic grass colourant. You can greatly improve the appearance of your lawn at anytime of the year. ColourGuard is so easy to apply, and one application can give your lawn up to 3 months of natural green colour. Say goodbye to brown lawns in winter and dry-looking lawns in summer! **THE COLOURGUARD DIFFERENCE** ColourGuard is NOT a lawn paint. ColourGuard is an organic pigment that is naturally absorbed by the grass leaf blade. This means you get to keep the beautiful natural green colour for up to 3 months.

## PROTECT YOUR LAWN

Think of ColourGuard like a sun screen for lawns – by screening out the harmful UV rays, but still allowing filtered light to hit the leaf blade. ColourGuard protects lawns during even the hottest summer months.

## THE 'NEED TO KNOW'

After you have applied ColourGuard, be sure to allow at least 2 hours of direct sunlight for the pigment to absorb. If your lawn is in a shaded area you may need slightly longer. ColourGuard is a permanent colourant, so it will only disappear as your lawn grows. Once ColourGuard has dried, it will not run or fade after rain. It's locked into the leaf blade until it grows out!

## DIRECTIONS:

ColourGuard is very easy to apply. Always be sure to check out the 'How to' video for ColourGuard [here](#) before application for further tips and advice. **APPLY IN 4 EASY STEPS: SHAKE BOTTLE WELL BEFORE USE!**

1. Attach your hose to the 2 Litre Ready To Use bottle, or mix the concentrate with water in a pressure sprayer as per the table above.
2. Keep bottle upright during application. Spray evenly across the lawn, working methodically from one side to another.

The Garden Enhancement Specialist

3. When spraying near hard surfaces like paths and driveways, stand on the surface and spray the ColourGuard away from the surface onto the lawn. If you do accidentally spray on surfaces, simply wash the colourant off immediately with hosed water.

4. Leave the lawn to dry for at least 2 hours afterwards {if in full sunlight}, or longer if it is shady. Easy!

RECOMMENDED CONCENTRATE FOR 600 LITRES SPRAY VOLUME PER HECTARE		
Application Rate	Area	Turf Condition
600ml–1200ml	1 hectare	Growing
1200ml–2400ml	1 hectare	Early Dormancy
2400ml–4800ml	1 hectare	*Full Dormancy* (2 initial applications required)
KNAPSACK SPRAYER		
Application Rate	Water Volume	Area
25ml	3.5Lt	50m <sup>2</sup>
50ml	7Lt	100m <sup>2</sup>

## PRECAUTIONS

- Do not apply to wet or dew affected lawn
- Avoid footpaths, driveways and other hard surfaces
- Allow up to 24 hours before desired result
- Allow adequate time for lawn to dry before walking on or applying water
- It's advisable to water well 3 to 4 days after application to wash off any excess.

## CLEANING

Use a general purpose window or floor cleaner.
